

Auto transformers

OECO's expertise in the design and manufacture of autotransformers stems from the manufacture of over 500,000 devices for Boeing, the former McDonnell Douglas, Lockheed Martin and many others over the course of the last four decades.

Size and weight are typically high priority considerations in aircraft design. OECO's custom autotransformers provide more effective regulation and leakage induction than a two winding transformer, making them ideal for customers' alternating current (AC) power distribution needs.

In addition to supplying the commercial aviation market, OECO provides autotransformers for many military and aerospace applications, including the Lockheed Martin C-5 and Boeing (formerly McDonnell Douglas) KC-10 Tanker.

Typical sizes range from 1.2 VA to 5.0 KVA.
