

Low voltage power supplies

OECO has designed and manufactured custom low voltage power supplies for over three decades for shipboard, airborne and ground applications, meeting all requirements for demanding commercial aerospace and military specifications. OECO's ability to offer expert design, manufacturing and testing capabilities for rugged applications makes it indispensable to its customers.

OECO's history of leadership in this field includes being the first to incorporate the power factor correction circuit into a military application – the Naval Secure Voice System. This system is powered by three different OECO power supplies that have all demonstrated more than one million hours mean time between failures ("MTBF").
